

Based on the document provided and the context you've shared, here are a few options for your high-level summary. You can select the one that best fits your presentation style.

Important Note: The provided document is for a **POC (Proof of Concept)** with a target date of **Q4 2025**. Your statement says this is a full integration going to production tonight. You should verify this discrepancy before presenting. If it is a full-scale launch based on a successful POC, these summaries will work.

Here are the summary options:

Option 1: Executive Overview (The most high-level and strategic option)

This option focuses on the business outcome and strategic alignment.

Overview: To enhance the new customer experience for First Citizens Bank (FCB), we are launching an integrated, self-service direct deposit switch solution within our digital banking platforms. This initiative leverages proven technology previously deployed for CIT to provide a seamless, secure, and modern account funding experience for our customers.

Strategic Business Value:

- **Accelerated Account Funding:** Significantly simplifies the process for new and existing customers to redirect their payroll direct deposits, speeding up the path to active account usage.
- **Cost Efficiency & Synergies:** Demonstrates direct technology synergy and cost-savings by repurposing and integrating existing high-quality assets (the CIT-built digital extension) across the combined FCB enterprise.
- **Modernized Customer Experience:** Replaces friction-filled manual processes with a streamlined, digital-first experience that is consistent across both desktop and mobile platforms.

Option 2: The "Technology & Synergies" Focus

This option highlights how you are efficiently using technology across different parts of the company.

Overview: Our technology group is successfully scaling and integrating proven digital capabilities from the CIT business unit to the broader First Citizens Bank platform. We have adapted our CIT Direct Bank digital extension into a web component that is now integrated into the FCB digital banking ecosystem for a cross-platform launch.

Value Delivered:

- **Proven Technology, Faster Time-to-Market:** By utilizing a technology stack already in production for CIT, we were able to deliver this integration with reduced technical risk and a shorter development cycle.
- **Seamless Platform Integration:** This solution is fully integrated into the Q2 digital banking ecosystem with central entitlements and a robust security architecture.
- **Unified Digital Experience:** Delivers a high-performance and consistent digital direct deposit experience across all FCB customer touchpoints (desktop and mobile web).

Option 3: Problem & Solution Format (Classic "Before & After")

This style effectively contrasts the improvements for leadership.

Context: Manually switching direct deposits is a friction-heavy process for new customers, which can delay account funding and active product engagement.

Our Solution: We are launching an integrated, digital direct deposit switching feature

leveraging ClickSwitch API technology. This provides customers with a secure, self-service tool directly within their FCB online or mobile banking portal to easily find their payroll provider and initiate a switch.

Value to Leadership:

- **Enhanced Customer Onboarding:** Reduces a key point of friction in the account opening journey.
- **Increased Product Adoption:** Encourages faster account funding and establishes FCB as the primary financial relationship.
- **Enterprise Synergy:** Showcases a tangible example of integrating and capitalizing on existing technology from the CIT and FCB combination to create value.
